Our Story

Based on Bawtry Road in Doncaster, Go Green was formed in 2000 by a number of key professionals in the waste management industry.

We offer a complete waste management and recycling solution, servicing a variety of industries across the UK. Throughout our years of operation, Go Green have advanced our professional knowledge and acute understanding of the waste industry.

This has enabled us to share our expertise with our customers regardless, of the complexity of a provision. We offer simplified and practical solutions which support a variety of businesses; this is managed by utilising our customer focused teams both in the office and on site.

Under the guidance of our highly experienced directors, Go Green Ltd has developed into a market leading waste management facilitator. We believe that our pursuit of excellence combined with our long-term future objectives sets us apart from our competitors.

The Benefits of Working With Go Green

A Partnership Approach

Go Green leads with a collaborative approach to client relationships by incorporating an objective based service, working towards larger outcomes encapsulating total waste management. With a proactive ethos, we support our client's waste journey by instilling our core principles into the customer service we provide.

Working with Go Green provides a range of benefits from sustainable waste management, full supply chain compliance, to online management and information tools.

Here is what you can expect from a partnership with Go Green:

SECTORS & SERVICES

Construction & Demolition

Working with customers from pre-start meetings right through to project completion, Go Green provide a cradle to grave approach to waste management. With an evolving waste landscape, its never been so important for customers to know their waste partners will adapt to onsite challenges and provide both innovative and cost effective solutions.

Your dedicated Account Management will ensure that all project KPIs are monitored throughout the works duration, and recorded for performance reviews. Meeting reviews will systematically be scheduled in at each stage of the project to ensure a smooth delivery and openings to assess improvements.

As part of standard service, Go Green will support customers with their social value delivery and engage with communities local to the projects for impactful and collaborative contributions. Building these alliances, and providing opportunities for both the customer and the local communities to mutually benefit from.

Soil Analysis & WAC Testing

The responsibility of completing soil sampling and classification is upon us all as waste producers, that's why Go Green offer a comprehensive service to fulfil these legal obligations. With access to site at the beginning of the project, Go Green provide bespoke testing as well as guidance on the appropriate type, quantity and volume of testing required, on a site by site basis. Our soil Management service includes, soil testing, soil classification for any waste from your site. With assistance on the analysis and support with post-result actions, we are on hand from the very start.

Muckaway & Aggregates

Once works are underway, our site support assists customers with stockpile management and segregation plans once excavation begins. With the right suppliers on hand, we explore reuse and soil treatment options to ensure landfill is the last resort. Our customers know that quality materials are a non-negotiable for the supply of aggregates, which is why we only provide the best materials and a reliable service, which covers both delivery and collection services, making the most of an end-to-end service.

Go Green have collated a substantial supply chain across the UK to give our customers a one stop shop for all their site requirements, from waste management, aggregate supply and backhauling.

INNOVATION

Portal

Technology designed to make reporting simple.

To give our customers the management and ownership they want of their waste data, Go Green developed a bespoke online portal housing customer waste data, reporting tools, carbon tracking and Duty of Care documentation.

Whether its waste breakdowns, recycling statistics, or compliance packs for site, the portal offers everything in one centralised place. Feedback received from our customer base contributed to its design, usability and efficiency. Dependant on your needs, the portal has something to suit your waste management requirements.

Wastelink

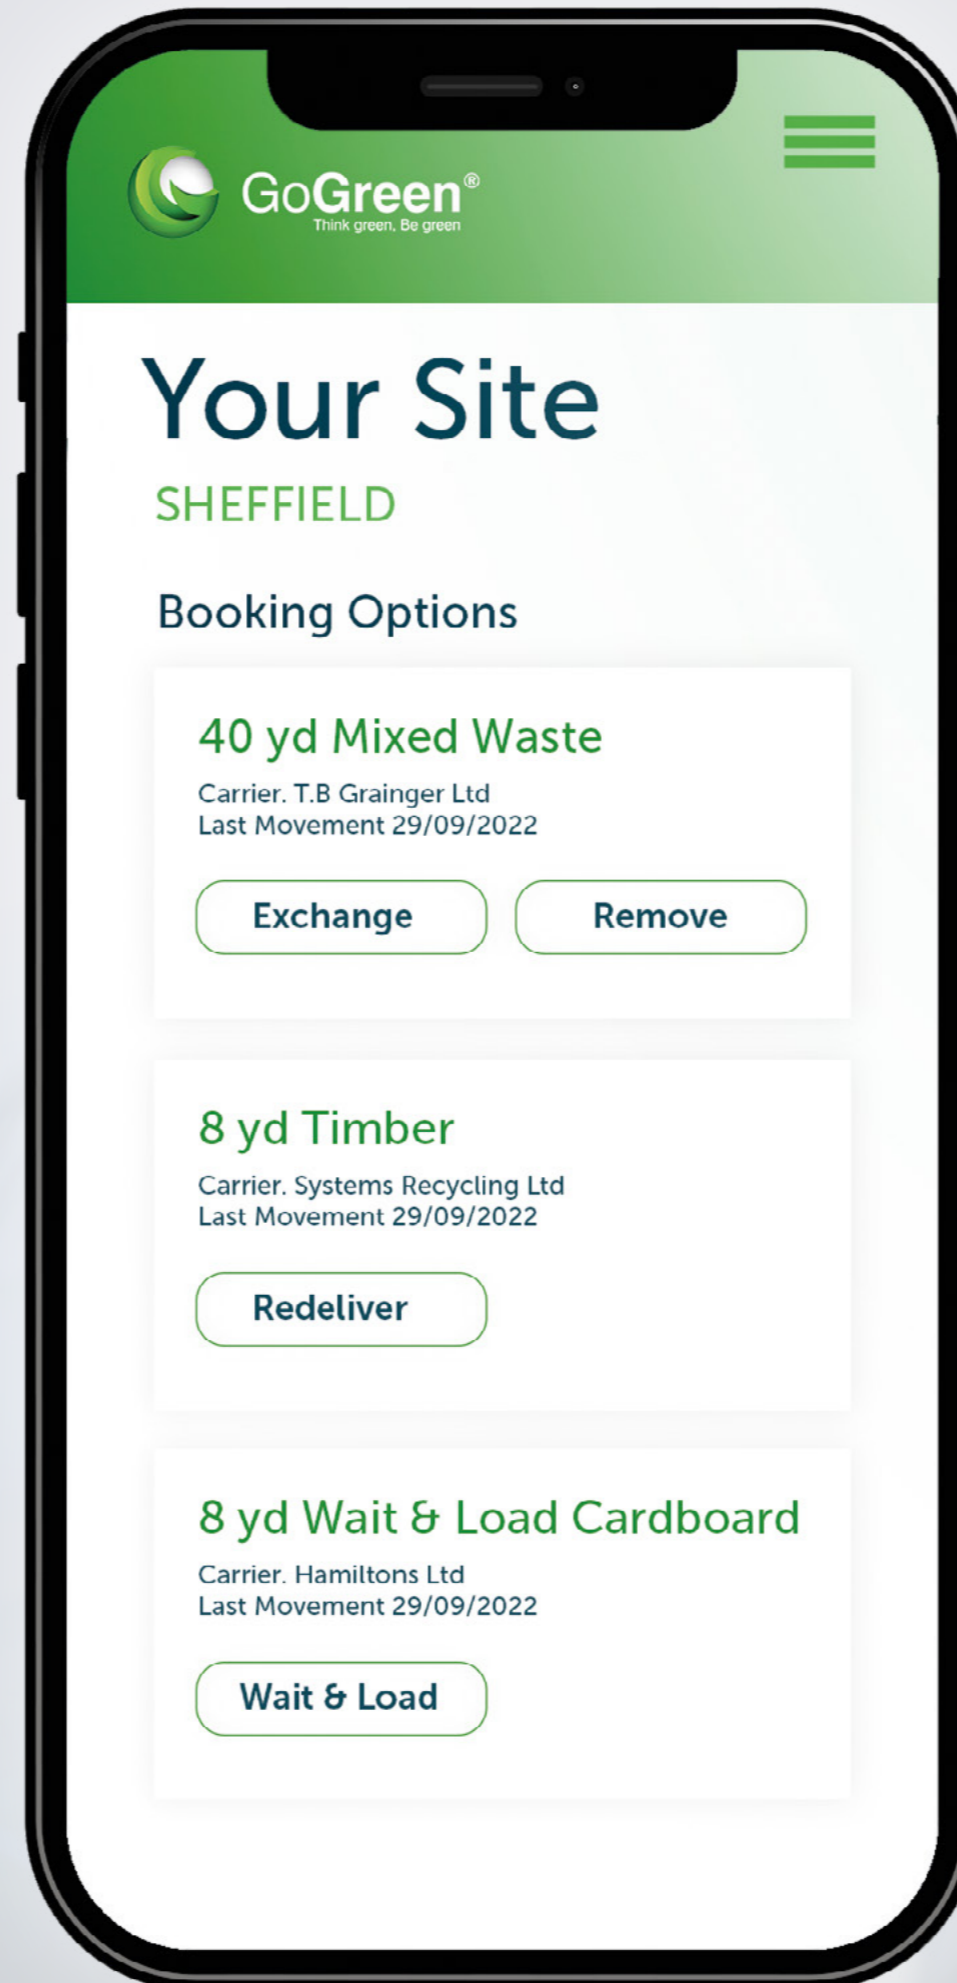

Technology at your fingertips.

Expectations of waste management, like everything else, have evolved as technology strives forward; that's why Go Green developed, and launched, our WasteLink App which increases convenience for businesses.

WasteLink gives our customers, and their teams, a direct connection to Go Green's internal systems, allowing on-the-go waste movement bookings. We know that our customers switch between being on the move or being located in an office, that is why we created the application to be available both as an app and online desktop. No matter where you are, you can make a booking.

Wastelink has saved me so much time, I can see exactly what's going on without having to contact anyone at Go Green.

I would 100% recommend it to others."

API's

Real-time information, whatever your platform.

Our operational management software is constantly evolving, so we have integrated into various APIs to enhance our system capability, and automate key business processes. This allows us to push data into customer systems in real-time, providing them with key information or reports as they become available. Through our integrations, customers have saved precious time and money, whilst making their operations run efficiently.

If you're in need of seamless integration, real time notification and adaptable use, Go Green's technology will be a great fit for your business.

ESG

ESG

Our ESG strategy has been founded upon our core environmental and social beliefs, whilst challenging ourselves with ambitious objectives, delivering on high-level metrics and proudly remaining an SME. We have embedded sustainability through all areas of our business, becoming governed by our environmental and social purpose through a collection of processes and procedures, and clear communication of strategy. Our structure has been developed to ensure that sustainability is a core element of Go Green's future.

We are proud to have set SBTi verified decarbonisation targets, which show our commitment to environmental stewardship, whilst advocating best practise standards within the industry. Our ever-evolving social purpose strategy enables us to support the wellbeing of both our employees and our local communities. These underlying areas of our business principles are governed through the culture we have organically created as our business has evolved, strengthening our mission to be the future in waste management.

Our GROWW Strategy

Our Approach to Sustainability

In 2021, we were proud to establish our GROWW Sustainability Framework to put an initial focus on challenging ourselves against our environmental and social outputs, and accurately reporting against our impacts. Since first launching the Framework, we have continuously built on our strategy to prioritise working in partnership with our customers to deliver social impact in the communities that are local to their projects, and tailor the support we carry out to each unique community.

Year-on-year we have seen an increase in the recorded amount of pure social value we have delivered, focusing solely on the additional outreach activities we achieve. This is aided by our full transparency of not including social value generated from our spend with local SME supply chain, due to the nature of our business being founded on championing use local supply chain partners.

Our GROWW Framework

GreenEthos

Safeguarding the planet by promoting sustainable business practices, alongside conservation initiatives and improving environmental knowledge.

ReEducate

Inspiring the next generation to understand environmental issues, interact with the waste industry, and form their own ideas about their future impact.

OurCommunity

Focusing on the communities we operate in nationwide, by fundraising, direct-from-profit donations, and volunteering time, whilst supporting local economic growth.

WasteSchool

Delivering training throughout our value chain and communities on fundamental practices that represent responsible business cultures, and promote diverse talent pools.

Wellness&Health

Prioritising the health and wellbeing of our stakeholders, whilst supporting wellbeing causes in the UK, with key significance on mental health awareness.

Our Commitments

GreenEthos – Reduce our Scope 1 & 2 emissions by 2030, and reach Net Zero by 2048.

ReEducate – Deliver our programmes to 10,000 children by the end of 2026.

OurCommunity – Deliver social value to every county in the UK by the end of 2025.

WasteSchool – Deliver at least 3,000 hours of training to our team per year.

Wellness&Health – Match the number of MHFA to physical first aiders by the end of 2023.

CORE PRINCIPLES

Supply Chain

Supplier Compliance

With our customer's compliance at the forefront of our delivered services, it's vital that we pay close attention to the 2500+ suppliers in our database. Our robust supplier approval process ensures our customers receive quality service in line with current legislation and best practice.

From site visits, to EA checks, compliance packs to waste transfer notes, Go Green manage the whole process and collate the information into our online customer portal for ease of access. By logging into the portal, all supplier licences and insurances can be viewed and downloaded when necessary.

Suppliers are categorised based on their service, recycling rates, audit trails and weight breakdowns; suppliers are then matched to customers based on the requirements of the job.

Certifications & Accreditations

Demonstrating our capabilities

Go Green have a number of memberships, accreditations and certifications, including ISO 9001 and 14001.

Our fully integrated management system allows us to support our customers, ensuring the service we provide is of the highest standard. Our customers audit our premises on a regular basis, and are always impressed with our stance on sustainability within our offices.

Go Green firmly believe that these memberships, like The 5% Club and Supply Chain Sustainability School, and certifications including: Constructionline, Safecontractor, RISQS and Cyber Essentials, are a clear demonstration of our waste management capabilities. We provide our customers with the reassurance that we will deliver an efficient and professional service throughout the UK.

The PAS: 402 specification requires waste management organisations to demonstrate sound environmental, health, safety and quality practices which then assists clients in selecting their contractors. Go Green are proud to be an affiliate member of PAS 402.
